

Our Seal Rescue Center is a part of Prof. Krzysztof Skóra Hel Marine Station of The Institute of Oceanography, Univeristy of Gańsk. It is located on the tip of Hel Penninsula in the city of Hel, Poland. It is a small town with ~3000 citizens, surrounded by the Baltic Sea, beautiful beaches and forests. There are couple of tourist attractions including Museum of Hel, Museum of Fishery, Museum of Coastal Defence, a lighthouse and couple of restaurants. In the neighboring towns there are opportunities to enjoy water sports like sup, surfing, etc. Hel is also a great place for birding during spring and autumn migration because it is often the first stopover for birds after they pass the sea. Hel is about 1,5 h train ride to Gdynia and 2h train ride to Gdańsk – the biggest cities in the area.

In the sealarium of Hel Marine Station we also house 5 resident seals which are a part of grey seal recovery program. They are playing role as ambassadors of the Baltic Sea and help us in education work.

We welcome students, graduates and other adult individuals who are looking for great opportunity to help with rescue & rehabilitation of stranded sick and injured seal pups.

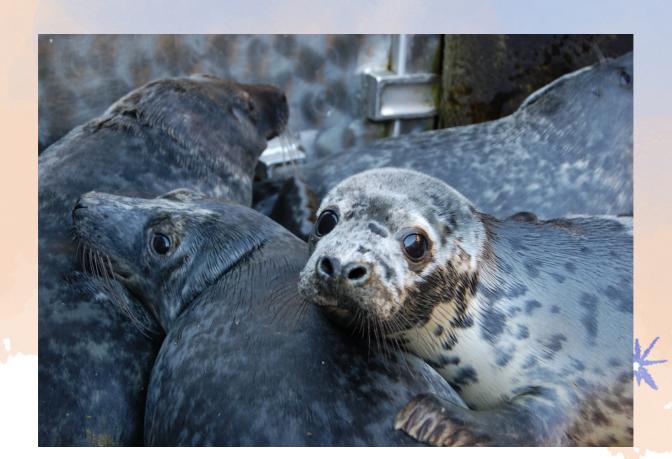

We have open space for three interns/ long term volunteers.

This is non-paid internship and interns are responsible for travel arrangment, food and all extra activities during time here. We offer free accommodation and lots of experience. We encourage students to apply for ERASMUS+ program to participate in this internship.

#### What we offer:

- Unique opportunity to work on seal rehabilitation and medical training
- Lots of learning and hands on experience
- Opportunity to be a part of seal recovery and release!
- Free housing (dorm with shared bathroom)
- Two days off a week so you can travel and experience local culture
- Certificate and letter of recommendation after successful completion of your work here

### Programm

Our interns and long term volunteers will assist proffesional staff and gain experience in two main blocks simultaneously:

Rescue, rehabilitation, and release of stranded seal pups Medical training and taking care of resident seals
